Silicone Trim[®] Iron wire carrier Stainless-steel punching metal

Silicon rubber + Metal composite gasket

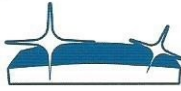

Adding to conventional iron wire carrier type, stainless-steel punching metal type is available

Trims are airtight, watertight, and dust resistant; therefore, they are used for edge protection or gap sealing. Additionally, Silicone Trim has the excellent characteristics of silicone rubber, such as high heat resistance, good chemical resistance, long durability, and electrical conductivity. You can choose seven colors for your application. Luminescent products are also available. Its installation is simple as it does not use adhesive. You can select specification of internal metal clips. Conventional iron wire carrier is economical. Stainless-steel punching metal type has high flexibility and excellent resistance to rust.

Features

| | | |
|--|---|--|
| <p>Chemical resistance</p>  <p>Silicone Trim has excellent heat resistance and chemical resistance as it uses a silicone rubber. It realizes high impact strength by the metal flame attachment.</p> | <p>Easy installation</p>  <p>Silicone Trim has individual internal metal clips to provide a stronger grip. Therefore, it is easy to install Silicone Trim simply by pushing on any exposed edge on metal or plastic plates. It can flexibly bend around curves.</p> | <p>Antirust</p>  <p>Stainless-steel (SUS443) can resist to rust.</p> |
| <p>Recyclable</p>  <p>No migration occurs because Silicone Trim does not use any adhesives. It can be easily recycled since it is removable.</p> | <p>Coloring</p>  <p>Many colors are available. (Please consult us for colors).</p> | <p>High heat resistance</p>  <p>The products can be used under the high heat circumstances. (Recommended environment: -30℃~160℃)</p> |

Applications

Silicone Trim is widely used for many applications such as packing for medical equipments, test equipments, etc.
